

Define the Problem Statements

Introduction:

In the ideation phase, defining a clear problem statement is essential to understand the challenges and set the direction for the project. The team analyzed common issues in IT service management to identify the core problems.

Problem Identification:

The team observed several challenges such as frequent VPN connectivity failures, delays in incident resolution, lack of proper escalation, and inefficient tracking of incidents across teams.

Problem Statement:

The primary problem statement defined is: *“To improve the efficiency of incident management by automating the lifecycle of incidents, ensuring faster resolution, proper escalation, and effective tracking using ServiceNow.”*

Scope of the Problem:

The problem focuses on handling incidents from creation to resolution, integrating change requests, managing child incidents, tracking Service Level Agreements (SLAs), and enabling knowledge creation for future reference.

Conclusion:

By clearly defining the problem statement, the project aims to enhance overall IT service efficiency and provide a structured approach to incident handling and resolution.
